No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                             A Geneseq 101002:*

This polypeptide comprises the novel tumour suppressor protein SSSCKS that is a substrate of protein kinase C and which acts as a negative regulatory of mitosis and as an inhibitor of the transformed phenotype. Its amino acid sequence was deduced from an isolated nucleic acid molecule (see ANV2302). The SSCKS nucleic acid, as well as homologous and hybridising nucleic acids are claimed, as are isolated proteins encoded by such nucleic acids, comprising the nucleic acids, host cells, and methods of inhibiting the expression of a transformed phenotype in a host cell by introducing the nucleic acids. Introduction of a SSCKS nucleic acid or gene product into a host cell inhibits mitosis of the host cell allowing the treatment of diseases associated with disorders of proliferation and/or with the expression of a malignant phenotype. SScKS can also be used to treat or identify disorders allowings the structure and cellular architecture (such as Alzheimer's disease), and may be a marker for aberrancies in fertility and/or nervous system development.
                                                                                                                                                                                                                                                                                                                                     Matches 1593;

This polypeptide comprises an active truncated form of the novel tumour suppressor protein SSecKs that is a substrate of protein kinase C and which acts as a negative regulatory of mitosis and as an inhibitor of the transformed phenotype. Its amino acid sequence was deduced from a partial cDNA clone (see AAV02301) obtained from NH3T3 cells. The full-length SSeCKS sequence (see AAV03101), as well as provided. Full-length SSeCKS nucleic acids are claimed, as are solated proteins encoded by such nucleic acids, vectors comprising the nucleic acids, host cells, and methods of inhibiting the cypression of a transformed phenotype in a host cell by introducing the nucleic acids. Introduction of a SSeCKS nucleic acid or gene product into a host cell inhibits mitosis of the host cell, allowing the treatment of diseases associated with disorders of proliferation and/or with the expression of a malignant phenotype. SSeCKS can also be used to treat or identify disorders of SSeCKS can also be used to treat or identify disorders of cytoskeletal structure and cellular architecture (such as Alzheimer's disease), and may be a marker for aberrancies in certility and/or nervous system development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTs). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention.

                                                                                                                                                                                                                                                                    The present invention relates to a method for the in vitro diagnosis of endometriosis by determining the amount of gene product from at least one specific gene in a patient sample and comparing this with the amount of gene product in a patient sample. A reduced level is indicative of endometriosis. The gene products may be fibronectin, p27, reticulocalbin, aldehyde dehydrogenase 6, gravin, phospholipase C epsilon, elastin, insulin-like growth factor binding protein-2, alpha-2 type IV collagen, transmembrane receptor PTK7, collagen type XVIII alpha 1, platelet derived growth factor receptor alpha, laminin M chain, subtilisin like protein PACE4 or nidogen. The method is useful for initial diagnosis of endometriosis, and also for monitoring progress and treatment of the disease. The present sequence is human gravin.

New polypeptide fragments are useful for the study oprotein kinase(s) s of protein kinase binding protein gravin and of modulation of action between gravin and

Example 1; Column 19-32; 32pp; English

This sequence corresponds to the human gravin polypeptide, and represents a polypeptide of the invention. The polypeptides are fragments capable of binding to type II regulatory subunit of cAMP-dependent protein kinase (PKA). Gravin is a kinase anchoring protein that binds to type II regulatory subunits of PKA and protein kinase C (PKC). Gravin is also an antigen of the autoimmune disease Myasthenia gravis (MG), where a patient develops antibodies against their own nicotinic acetylcholine receptors. The polypeptides are useful for providing analogues of gravin in the study of the modulation (e.g. blocking, inhibiting and stimulating) of interactions between gravin and kinase. The peptides are involved in the modulation of gravin-kinase interactions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the protein sequence of human gravin. Gravin is an A-kinase anchoring protein (AKAP) which is involved in the localisation of cAMP dependent protein kinase A (PKA) via interactions between the RII binding region and the PKA regulatory subunit RII. Gravin is also an antigen found in myasthenia gravis sufferers, and it is thought that antibodies to it may be useful in modulating the binding of PKA, and thus aid in the treatment of the disease. The gravin coding sequence was isolated by first screening a human umbilical vein patient, and then searching a human heart cDNA library for sequences resembling the isolated sequence. This was done because the first sequence obtained was shown to be shorter than the full length cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotides useful for detecting gravin in patients suffering from Myasthenia gravis encodes cAMP-dependent protein kinase-binding polypeptide and protein kinase C-binding polypeptide of gravin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polyperase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as (II). (II) is useful for generating partners are useful in medical imaging of sites expressing (II). (I) and (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in classomatics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed continuation in the main acid sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       33;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QLSSVNGVAEQGDVHVQEENQEGQ------EEEVVDEDVGQRESEDVREKDR 102

Gravin is a kinase anchoring protein that binds to type II regulatory subunits of PKA and protein kinase (PKC). Gravin is also an antigen of the autoimmune disease Myasthania gravis (MG), where a patient develops antibodies against their own nicotinic acetylcholine receptors. The polypeptides are useful for providing analogues of gravin in the study of the modulation (e.g. blocking, inhibiting and stimulating) of interactions between gravin and kinase. The peptides are involved in the modulation of gravin-kinase interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

                   The present sequence is a recombinant version of the human gravin protein (ARAP) which is an A-kinase anchoring protein (ARAP) which is involved in the localisation of cAMP dependent protein kinase A (PKA) via interactions between the RII binding region and the PKA regulatory subflerers, and it is thought that antibodies to it may be useful in modulating the binding of PKA, and thus aid in the treatment of the disease. This sequence was used in an assay to determine the ability of

This sequence corresponds to residues 1130-1780 of gravin, and represents a polypeptide of the invention. The polypeptides are fragments capable of binding to type II regulatory subunit of cAMP-dependent protein kinase (PKA). Gravin is a kinase anchoring protein that binds to type II regulatory subunits of PKA and protein kinase C (PKC). Gravin is also an artigen of the autoimmune disease Mysathenia gravis (KG), where a patient develops antibodies against their own nicotinic acetylcholine receptors. The polypeptides are useful for providing analogues of gravin in the sundy of the modulation (e.g. blocking, inhibiting and stimulating) of interactions between gravin and kinase. The peptides are involved in the modulation of gravin-kinase interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1275

Gravin is an A-kinase anchoring protein (AKAP) which is involved in the localisation of cAMP dependent protein kinase A (PKA) via interactions between the RII binding region and the PKA regulatory subunit RII. Gravin is also an antigen found in myasthenia gravis sufferers, and it is thought that antibodies to it may be useful in modulating the binding of PKA, and thus aid in the treatment of the disease. This sequence was used in an assay to identify the precise position of the RII binding site within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polynucleotides useful for detecting gravin in patients suffering from Myasthenia gravis encodes cAMP-dependent protein kinase-binding polypeptide and protein kinase C-binding polypeptide of gravin

The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABB68397

The polypeptides are fragments capable of binding to type II regulatory subunit of cAMP-dependent protein kinase (PKA). Gravin is a kinase anchoring protein that binds to type II regulatory subunits of PKA and protein kinase C (PKC). Gravin is also an antigen of the autoimmune disease Myasthenia gravis (MG), where a patient develops antibodies against their own nicotinic acetylcholine receptors. The polypeptides are useful for providing analogues of gravin in the study of the modulation (e.g. blocking, inhibiting and stimulating) of interactions between gravin and kinase. The peptides are involved in the modulation of gravin-kinase interactions.

Gravin is an A-kinase anchoring protein (AKAP) which is involved in the localisation of cAMP dependent protein kinase A (PKA) via interactions between the RII binding region and the PKA regulatory subunit RII. Gravin is also ar antigen found in myasthenia gravis sufferers, and it is thought that antibodies to it may be useful in modulating the binding of PKA, and the aid in the treatment of the disease. This sequence was used in an assay to identify the precise position of the RII binding site within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; gravin; PKA RII binding site; myasthenia gravis; kinase anchoring protein; cAMP dependent protein kinase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and insectiodes, therapeutics and pharmaceutical drugs. The invention in higher eukaryotes for the development of insectiodes, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL36511), expressed DNA sequences (ABL16176-ABL36511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  :: |:| || || : ::| :| |:| 3153 VITEDGKPVQEKTTKRVLKKIGPEEQTTFKITM--IESEDNDSV---TVIVDEEPEIASP 3207

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-08-994-570-14

Sequence 14, Application US/08994570

Patent No. 609029

GENERAL INFORMATION:
APPLICANT: Scott, John D.,
APPLICANT: Nauert, Brian J.,
APPLICANT: Rianck, Theresa M.
TITLE OF INVENTION: Protein Binding Domains of Gravin
NUMBER OF SEQUENCES: 24

CORRESPONDENCE ADDRESS:
ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun
STREET: Chicago

CITY: Chicago

STATE: Illinois
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
